

# INFORMATION SECURITY POLICY

JANUARY 2020  
v.20200110

# Executive Summary

CorpU's Information Security Policy is designed to protect information and critical resources from a wide range of threats in order to ensure business continuity, minimize business risk, and maximize return on investments and business opportunities. Information Technology (IT) security is achieved by implementing a suitable set of controls, including policies, processes, procedures, organizational structures, and software and hardware functions. These controls need to be established, implemented, monitored, reviewed and improved, where necessary, to ensure that the specific security and business objectives of CorpU are met.

The policies govern the privacy, security, and confidentiality of CorpU and all customer data. IT security measures are intended to protect information assets and preserve the privacy of CorpU employees, customers, contractors, suppliers, and other associated entities. Inappropriate use exposes CorpU to risks including virus attacks, compromise of network systems and services, and legal issues.

All employees share responsibility for the security of the information and resources in their respective departments. All users of the CorpU network are obligated to follow their employee agreement that abides each person to the protection of all data. Other policies maintained by CorpU's Information Security Policy:

- + Acceptable Use
- + Staffing
- + Wireless communication
- + Server and workstations
- + Network security
- + Permissions and group management
- + Password policy
- + Incident management
- + Disaster Recovery and Business Continuity
